

Genie Timeline™ for Microsoft™ Windows

Automatic Continuous Data Protection for your system and files.

Genie Timeline offers real time backup for all your critical files in an easy to use setup. Just follow a simple 2 or 3-step wizard to configure your backup and all your data will be protected with Genie Timeline.

Genie Timeline is your parallel universe with your computing history, deleted and modified files can be retrieved easily by a click of a button. You can browse the Timeline to any desired date to restore data.

Product Overview

Genie Timeline is a new and innovative way to performing data protection; Genie Timeline is a time machine for Windows that performs real time and continuous data protection on all your files and folders, ensuring that you receive ultimate data protection. As your data is monitored in real-time, changes are detected, recorded, and backed using Genie Timeline's Intelli CDP. Over time, Genie Timeline will accumulate different versions of all your files and will allow you to travel back in time to view and restore your files as they existed in the past.

Key Benefits

- Backup your system: Genie Timeline will backup your Windows folder, Program files, User folders, and System State for complete system recovery.

- Backup your important data: Backs up Emails, Documents, Desktop, Office files, eBooks, Bookmarks, pictures, videos, and music.
- Track changes occurred to files constantly and backup files at a specified time interval if the backup destination is accessible.
- Resume backing up the same file after powering off the system, without restarting the backup process.
- Backup outlook email files (PST) using dynamic block level incremental that are larger than 50 MB.
- Shows frequent backups for the past 2 hours, hourly backups for the past 48 hours, daily backups for the past week, weekly backups onwards.
- Automatically deletes old files that are not showing on Genie Timeline to free space.
- Offers security and compression options for backup.
- Restore individual data or all data backed up.
- Recover your system from disasters via Disaster Recovery option.

Genie Timeline™ for Microsoft™ Windows

- Restore deleted files that are in the backup.
- Detect and restore deleted files in the same location.
- Show versions of files backed up.
- Restore data from an old archive.
- Creates only one job at a time and closes the old one for archiving purposes.
- Backs up local and remote locations.
- Stops backups while playing games, watching movies, or presentations.
- Runs on low resources when your computer is running on batteries, stops when power level is low.

Block Level Technology

Genie Timeline uses a revolutionary new way in backing up large files, after the initial backup has taken place, only new and changed files are included into the backup. So rather than having to back up a large file, Genie Timeline uses block level technology to determine and backup only modified files; allowing backup to take less time and use less space.

Windows Integration

Genie Timeline drive is accessed from Windows Explorer where you can slide the Timeline bar to view, open and restore versions of the protected files.

You can also use Windows Context Menu (right-click menu) to add files to your backup plan or even restore deleted files from a specific folder.

This gives the ability to backup and restore without having to deal with complex backup job steps and time consuming procedures.

Version History

Go back in time with Genie Timeline and recover old files. Genie Timeline saves past versions of your documents, half Hour Backups Daily Backups for Past Week, Weekly Backups for Each Month.

Automatically allowing you to go back to any chosen time and retrieve data just as it was at that given point in time. If the drive starts running out of free space, Genie Timeline will automatically delete (purge) old versions of files to free up space.

Genie Timeline™ for Microsoft™ Windows

Protection Level

Genie Timeline calculates the protection level of files selected for back up to notify users on the health of their backups. If all files are successfully backed up, the protection level is at 100%. If any modifications occur and files are not yet backed up, the protection level will be lowered.

Auto Resume

If your backup device is not attached to your computer, Genie Timeline will keep track of all changes and back them up whenever the device is reattached.

In case of a sudden power outage, backup disruption, or computer shutdown, Genie Timeline intelligently identifies where the backup halted, and will pick up and resume right where it left-off.

Email Notification

Users can enable email notification with smart authentication detection and SSL support, via Genie Server or SMTP server. User is also notified in case of any errors by pop-ups agents every 24 hours. If the user's space is running low; warning of low space, which initiates at 10%, will appear in pop-up. These reminders will caution you to take action.

Silent Operation

Genie Timeline works silently in the background so it stays out of your way. It monitors and records data changes as they occur which are then backed up at timed intervals.

Backup implementation uses up only a small hit on system resources such as CPU and memory, making it practical for users who might run performance-demanding programs.

Automatic Setup and Simple Interface

The setup process is practically automatic. When first setting up Genie Timeline, it predefines what data should be included in the backup and recommends which drives are best to be used as the backup destination.

Genie Timeline's clean cut interface makes it seamlessly easy to use. With a user friendly, intuitive, wizard-based interface, it can't get any simpler.

Folder and file selection in Genie Timeline is the same style as Windows Explorer. This means that it's easy to select files and folders for backup as this will be familiar to you.
